VOTERS THINK GOV. CHRISTIE IS STUBBORN BUT INDEPENDENT AND SMART

NEW BRUNSWICK, N.J –New Jersey’s registered voters think Gov. Chris Christie is “stubborn,” but they also see him as “independent” and “smart,” according to a Rutgers-Eagleton Poll released today. About 4 in 10 Garden Staters think these words describe Christie “very well,” while fewer than 2 in 10 say they do not describe him at all. Given a set of four positive and four negative character traits, slightly more voters say the positive traits describe Christie very well.

The telephone poll of 751 registered voters statewide was conducted Aug. 5 to 8 and has a margin of error of +/-3.6 percentage points.

“New Jerseyans describe the governor as a smart leader, but they are also quite willing to call him stubborn,” said David Redlawsk, director of the Rutgers-Eagleton Poll and professor of political science. “Many who say he isn’t doing a good job, describe him in positive terms.”

Positive and negative views of Christie

Asked how strongly they agree with a random list of four positive (smart, independent, strong leader and reformer) and four negative traits (stubborn, uncaring, arrogant and bully) to describe Christie, three-quarters say stubborn “very” (42 percent) or “somewhat” well (34 percent). About the same percentage call him “very” (39 percent) or “somewhat” smart (37 percent). Seventy-four percent agree Christie is at least somewhat independent; 70 percent view him as a strong leader. Sixty-six percent call him a reformer, 60 percent arrogant, 49 percent a bully and 47 percent uncaring.

“That both the positive and negative descriptors fit is striking,” said Redlawsk, “that some of this is driven by partisanship is not. But a majority of Democrats say that all the positive traits are at least somewhat applicable, while a majority of Republicans (69 percent) agree that one negative – stubborn – applies. Republicans are very positive about the governor. Democrats see both positive and negative.”

Independents are mixed; a majority agrees that all the positive traits apply at least somewhat to Christie, as well as two negatives – stubborn (76 percent) and arrogant (69 percent).

“Stubborn can be seen both ways,” said Redlawsk. “The governor does seem to make it a virtue, but its possible coupling with arrogance in independent voters’ minds could suggest there is a thin line between a positive and negative assessment of such a trait.”

Favorability is positive, but job performance negative

According to the poll, Christie’s favorability among registered voters has returned to February’s level (46 percent), but his unfavorable rating during the same stretch has increased 13 points to 39 percent. Only 15 percent of respondents today say they don't have an opinion of Christie, down from 29 percent in February.

At the same time, though almost half the voters say they have a favorable opinion of the governor, a majority think Christie is doing only a fair or poor job. Thirty-nine percent say he is doing a good job, but 33 percent say he is doing a fair job and 25 percent rate him poor. The state budget is the issue that most strongly influences attitudes toward Christie – 63 percent of voters think more could have been done to alleviate program cuts. Only 30 percent say they support the budget as passed.

Public employee union members are more negative

Public employee union members (about 12 percent of respondents) are significantly more likely to say the negative traits describe Christie “very well.” More than half (57 percent) agree he is stubborn, while 49 percent call him arrogant, 41 percent a bully 34 percent uncaring. At the same time they are relatively likely to agree Christie is independent (41 percent) and smart (34 percent). Fewer see him as a reformer or leader (each 26 percent).

Perceptions of Christie as leader vary by employment status

Among unemployed New Jerseyans, only 27 percent call Christie a strong leader, compared to 36 percent of registered voters; 35 percent of the jobless disagree with the description. However, more than half of retired New Jerseyans think Christie a strong leader, while 15 percent disagree. The evaluation of part-time or full-time workers is more mixed: about one third from each employment category think him a strong leader. About one-quarter from each disagree.

A gender gap in perceptions

Men and women hold different perceptions of Christie and his job performance. More men – 51 percent to 42 percent – feel favorable toward Christie and his job performance; 36 percent of men compared to 31 percent of women rate his work performance as fair.

Nearly 80 percent of women agree Christie is stubborn, 75 percent call him independent and 71 percent say he is smart. He is called smart (82 percent), a strong leader (76 percent) and independent (73 percent) by men. Almost half the men, compared to one-third of the women, think the bully label does not apply to Christie. By a 10-point margin, women are more likely to say Christie is not a strong leader.

QUESTIONS AND TABLE FOLLOW ON THE NEXT PAGE

**Rutgers-Eagleton Poll August 6 – August 8, 2010
Questions and Tables**

The questions covered in the release of August 12, 2010 are list below. Column percentages may not add to 100% due to rounding. All percentages are of New Jersey Registered Voters.

Q. Please rate how Governor Chris Christie is handling his job as Governor. Is it excellent, good, fair, or poor?

Excellent	12%
Good	27%
Fair	33%
Poor	25%
DK	3%

Rutgers-Eagleton Poll August 5-8, 2010
New Jersey Statewide Poll

The Rutgers-Eagleton Poll was conducted from August 5-8, 2010 with a scientifically selected random sample of 752 registered voters from throughout the state of New Jersey. Data are weighted to represent known parameters in the New Jersey population, including gender, age, race, education, and Hispanic ethnicity. All results are reported with these weighted data. This telephone poll included 681 landline respondents acquired through random digit dialing, supplemented by 91 interviews of randomly selected cell phone only households.

All surveys are subject to sampling error, which is the expected probable difference between interviewing everyone in a population versus a scientific sampling drawn from that population. The sampling error for a sample of 752 registered voters is +/-3.6 points, at a 95 percent confidence interval. Thus if 50 percent of New Jersey registered voters favored a particular position, one would be 95 percent confident that the true figure would be between 46.4 and 53.6 percent (50 +/- 3.6) had all New Jersey registered voters been interviewed, rather than just a sample. Sampling error increases as the sample size decreases, so statements based on various population subgroups are subject to more error than are statements based on the total sample. Sampling error does not take into account other sources of variation inherent in public opinion studies, such as non-response, question wording or context effects.

Data were collected by Braun Research, Incorporated, of Princeton, NJ and were analyzed by staff of the Rutgers-Eagleton Poll. For the landline respondents, the AAPOR response rate 3 was 18.0%, the refusal rate 2 was 26.3% and the cooperation rate 2 was 39.8%. For the cell phone respondents, the AAPOR response rate 3 was 9.1%, the refusal rate 2 was 30.0% and the cooperation rate 2 was 25.1%.
