**Rutgers-Eagleton Poll: Most New Jerseyans Aware of, Trust the U.S. Census**  
*Two-thirds of New Jerseyans trust government's use of U.S. Census data*

NEW BRUNSWICK, N.J. (September 30, 2020) – As counting efforts for the 2020 U.S. Census draw to a close, most New Jerseyans are aware of the Census and its purposes, and trust the federal government's use of their information, according to the latest Rutgers-Eagleton Poll.

Just over half (55 percent) of New Jerseyans know that residents are required by law to submit a Census form, and large majorities know the Census is used to determine the amount of federal monies that communities will receive (83 percent) and to determine each state's number of representatives in Congress (74 percent).

Moreover, 68 percent believe the Census does not ask for more personal information than the government needs, while 15 percent say they trust the government "a great deal" and 47 percent say they trust the government "a fair amount" to use their Census information properly.

A majority of New Jerseyans (62 percent) know the Census is not used to determine whether someone is in the country legally; three in 10 (29 percent) New Jerseyans incorrectly believe this, however.

While it is too early to say how many New Jerseyans will have filled out their Census forms by the deadline, 53 percent of New Jerseyans said they had heard or read "a lot" about the U.S. Census when the survey was conducted this past spring, and another 25 percent heard "something" about it. Almost nine in 10 recalled receiving an instructional letter or postcard related to the U.S. Census, or the questionnaire itself.

"New Jerseyans, overall, are aware of the 2020 U.S. Census and its vital implications for the state, despite initial controversy surrounding a possible citizenship question and setbacks because of the pandemic," said Ashley Koning, assistant research professor and director of the [Eagleton Center for Public Interest Polling \(ECPIP\)](#) at [Rutgers University–New Brunswick](#). "New Jersey's awareness and knowledge are illustrated by the state's almost 99 percent response

rate to date, according to the U.S. Census Bureau.”

Yet some demographic differences persist. Non-white residents are more likely than white residents to think the Census asks for too much personal information and are less likely to trust the government to use the information properly. Though majorities of both non-white and white residents know the Census determines the number of representatives for each state and how much money communities get, the former are a bit less likely to believe so than the latter; non-white residents are also slightly more likely to believe the Census is used to determine an individual’s citizenship status.

“These differences in trust and knowledge may be at the root of why predominantly non-white areas in New Jersey have lower response rates than other parts of the state,” said Koning. “Enumeration in these areas, especially, is crucial for federal funding and programs.”

Women are more likely than men to say they have heard or read something about the Census, recall receiving something in the mail, and have completed the questionnaire. Women are less certain than men about whether the Census is used to determine the number of each state’s Congressional representatives.

Younger residents are less aware of the Census, whether or not their household has received anything related to it, and whether they are required by law to fill it out. Those under 50 are more likely to believe the Census asks for more personal information than needed, yet the youngest and oldest residents in the Garden State are more likely to trust the government’s use of Census information than those in the middle. Residents of all ages are similarly aware of the Census’ purposes.

Those with higher levels of education are more likely to be aware of the Census, remember receiving something related to it, have filled it out, and are more likely to know why it is conducted.

“Education is another crucial factor for awareness and knowledge,” said Kyle Morgan, research associate at the [Eagleton Center for Public Interest Polling \(ECPIP\)](#) at [Rutgers University–New Brunswick](#). “Those with less than a college degree are less likely to know what the Census is and is not used for, which may explain why this same group also believes the Census asks for more personal information than needed and is less trusting of the government when it comes to using the data.”

Even when it comes to the U.S. Census, some partisan divisions exist. Republicans are less likely to have heard or read something about the Census. While a majority of partisans of all stripes trust the government to use data from the Census properly, Republicans are slightly more likely to say they trust the government “a great deal,” while independents have less trust than Democrats or Republicans.

Results are from a statewide poll of 1,502 adults contacted by live callers on landlines and cell

phones from April 22 – May 2. The full sample has a margin of error of +/-2.9 percentage points; the subsamples of 747 and 755 adults each have a margin of error of +/-4.1 percentage points. Interviews were done in English and, when requested, Spanish.

###

**Broadcast interviews:** Rutgers University–New Brunswick has broadcast-quality TV and radio studios available for remote live or taped interviews with Rutgers experts. For more information, contact Neal Buccino [neal.buccino@echo.rutgers.edu](mailto:neal.buccino@echo.rutgers.edu).

**ABOUT RUTGERS—NEW BRUNSWICK**

*Rutgers University–New Brunswick is where Rutgers, the State University of New Jersey, began more than 250 years ago. Ranked among the world’s top 60 universities, Rutgers’s flagship university is a leading public research institution and a member of the prestigious Association of American Universities. It is home to internationally acclaimed faculty and has 12 degree-granting schools and a Division I Athletics program. It is the Big Ten Conference’s most diverse university. Through its community of teachers, scholars, artists, scientists, and healers, Rutgers is equipped as never before to transform lives.*

**ABOUT THE EAGLETON CENTER FOR PUBLIC INTEREST POLLING (ECPIP)**

*Home of the Rutgers-Eagleton Poll, ECPIP was established in 1971 and is the oldest and one of the most respected university-based state survey research centers in the United States. Now in its 48<sup>th</sup> year and with the publication of over 200 polls, ECPIP’s mission is to provide scientifically sound, non-partisan information about public opinion. To read more about ECPIP and view all of our press releases, published research, and data archive, please visit our website: [eagletonpoll.rutgers.edu](http://eagletonpoll.rutgers.edu). You can also visit our [Facebook](#) and [Twitter](#).*

**ABOUT THE EAGLETON INSTITUTE OF POLITICS**

*The Eagleton Center for Public Interest Polling is a unit of the Eagleton Institute of Politics at Rutgers University-New Brunswick. The Eagleton Institute studies how American politics and government work and change, analyzes how the democracy might improve, and promotes political participation and civic engagement. The Institute explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. To learn more about Eagleton programs and expertise, visit [eagleton.rutgers.edu](http://eagleton.rutgers.edu).*

**QUESTIONS AND TABLES START ON THE FOLLOWING PAGE**

**Questions and Tables**

*The questions covered in this release are listed below. Column percentages may not add to 100% due to rounding. Respondents are of New Jersey adults; all percentages are of weighted results. Interpret groups with samples sizes under 100 with extreme caution.*

## Methodology

The Rutgers-Eagleton Poll was conducted by telephone using live callers April 22 to May 2, 2020, with a scientifically selected random sample of 1,502 New Jersey adults, 18 or older. Persons without a telephone could not be included in the random selection process. Respondents within a household are selected by asking randomly for the youngest adult male or female currently available. If the named gender is not available, the youngest adult of the other gender is interviewed. The poll was available in Spanish for respondents who requested it. This telephone poll included 452 adults reached on a landline phone and 1050 adults reached on a cell phone, all acquired through random digit dialing. Distribution of household phone use in this sample is:

Cell Only:	43%
Dual Use, Reached on Cell:	27%
Dual Use, Reached on LL:	29%
Landline Only:	1%

The data were weighted to be representative of the non-institutionalized adult population of New Jersey. The weighting balanced sample demographics to target population parameters. The sample is balanced to match parameters for sex, age, education, race/ethnicity, region and phone use. The sex, age, education, race/ethnicity and region parameters were derived from 2018 American Community Survey PUMS data. The phone use parameter was derived from estimates provided by the National Health Interview Survey Early Release Program.<sup>123</sup> Weighting was done in two stages. The first stage of weighting corrected for different probabilities of selection associated with the number of adults in each household and each respondent's telephone usage patterns. This adjustment also accounts for the overlapping landline and cell sample frames and the relative sizes of each frame and each sample. This first stage weight was applied to the entire sample which included all adults. The second stage of the weighting balanced sample demographics to match target population benchmarks. This weighting was accomplished using SPSSINC RAKE, an SPSS extension module that simultaneously balances the distributions of all variables using the GENLOG procedure. Weights were trimmed to prevent individual interviews from having too much influence on the final results. The use of these weights in statistical analysis ensures that the demographic characteristics of the sample closely approximate the demographic characteristics of the target population.

All surveys are subject to sampling error, which is the expected probable difference between interviewing everyone in a population versus a scientific sampling drawn from that population. Sampling error should be adjusted to recognize the effect of weighting the data to better match the population. In this poll, the simple sampling error for 1,502 New Jersey adults is +/-2.5 percentage points at a 95 percent confidence interval. The design effect<sup>4</sup> is 1.31, making the adjusted margin of error +/- 2.9

<sup>4</sup> Post-data collection statistical adjustments require analysis procedures that reflect departures from simple random sampling. We calculate the effects of these design features so that an appropriate adjustment can be incorporated into tests of statistical significance when using these data. The so-called "design effect" or *deff* represents the loss in statistical efficiency that results from a disproportionate sample design and systematic non-response.

percentage points. Thus, if 50 percent of New Jersey adults in this sample favor a particular position, we would be 95 percent sure that the true figure is between 47.1 and 52.9 percent (50 +/- 2.9) if all New Jersey adults had been interviewed, rather than just a sample.

Sampling error does not consider other sources of variation inherent in public opinion studies, such as non-response, question wording, or context effects.

This Rutgers-Eagleton Poll was fielded by Braun Research, Inc. with sample from Dynata. The questionnaire was developed and all data analyses were completed in house by the Eagleton Center for Public Interest Polling (ECPIP). Dr. William Young assisted with analysis and preparation of this report. The Rutgers-Eagleton Poll is paid for and sponsored by the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a non-partisan academic center for the study of politics and the political process. Full questionnaires are available on request, and can also be accessed through our archives at [eagletonpoll.rutgers.edu](http://eagletonpoll.rutgers.edu).
