CENTER FOR PUBLIC INTEREST POLLING

The Eagleton Center for Public Interest Polling (ECPIP), home of the Rutgers-Eagleton Poll, was established in 1971. Now celebrating its 50th anniversary and publication of over 200 public opinion polls on the state of New Jersey, ECPIP was the first university-based statewide public opinion polling operation in the United States.

Our mission is to provide scientifically sound, non-partisan information about public opinion. ECPIP conducts research for all levels of government and nonprofit organizations with a public interest mission, as well as college and university-based researchers and staff. ECPIP makes it a priority to design opportunities for undergraduate and graduate students to learn how to read, analyze, design, and administer polls. We pride ourselves on integrity, quality, and objectivity.

To read more about ECPIP and view all of our press releases and published research, please visit our website: eagletonpoll.rutgers.edu.

Methodology

The Rutgers-Eagleton Poll was conducted by telephone using live interviewers October 14-22, 2022, with a scientifically selected random sample of 1,002 New Jersey adults, 18 or older.

Persons without a telephone could not be included in the random selection process.

Respondents within a household are selected by asking randomly for the youngest adult male or female currently available. If the named gender is not available, the youngest adult of the other gender is interviewed. This telephone poll included 221 adults reached on a landline phone and 781 adults reached on a cell phone, all acquired through random digit dialing; 473 of the cell phone completes were acquired through one-to-one SMS text messaging by live interviewers that led respondents to an online version of the survey. Distribution of phone use in this sample is:

Cell	31%
Text to Web	47%
Landline	22%

The data were weighted to be representative of the residential adult population of New Jersey. The weighting balances sample demographics to target population parameters. The sample is balanced, by form and overall, to match parameters for sex, age, education, race/ethnicity, region and phone use. The sex, age, education, race/ethnicity, and region parameters were derived from 2019 American Community Survey PUMS data. The phone use parameter was derived from estimates provided by the National Health Interview Survey Early Release Program.¹

Weighting was done in two stages. The first stage of weighting corrects for different

¹ NCHS, National Health Interview Survey, 2017–2019; U.S. Census Bureau, American Community Survey, 2017–2019.

probabilities of selection across the telephone samples associated with the number of adults in each household and each respondent's telephone usage patterns. This adjustment also accounts for the overlapping landline and cell sample frames and the relative sizes of each frame and each sample.²

The final stage of weighting balances sample demographics, overall and by form, to match target population benchmarks. This weighting was accomplished using SPSSINC RAKE, an SPSS extension module that simultaneously balances the distributions of all variables using the GENLOG procedure. Weights were trimmed to prevent individual interviews from having too much influence on survey estimates. The use of these weights in statistical analysis ensures that the demographic characteristics of the sample closely approximate the demographic characteristics of the target population.

A series of weight variables was computed. One weight for estimates based on the total sample ("weight"), plus separate weights for each of the split samples.

Post-data collection statistical adjustments require analysis procedures that reflect departures from simple random sampling. We calculate the effects of these design features so that an appropriate adjustment can be incorporated into tests of statistical significance when using these data.

All surveys are subject to sampling error, which is the expected probable difference between interviewing everyone in a population versus a scientific sampling drawn from that population. Sampling error should be adjusted to recognize the effect of weighting the data to better match the population. In this poll, the simple sampling error for 1,002 New Jersey adults is +/-3.1

² Buskirk, T. D., & Best, J. (2012). Venn Diagrams, Probability 101 and Sampling Weights Computed for Dual Frame Telephone RDD Designs. *Journal of Statistics and Mathematics*, 15, 3696-3710.

percentage points at a 95 percent confidence interval. The design effect³ is 1.69, making the adjusted margin of error +/- 4.0 percentage points. Thus, if 50 percent of New Jersey adults in this sample favor a particular position, we would be 95 percent sure that the true figure is between 46.0 and 54.0 percent (50 +/- 4.0) if all New Jersey adults had been interviewed, rather than just a sample.

Sampling error does not consider other sources of variation inherent in public opinion studies, such as non-response, question wording, or context effects.

This survey was fielded by Braun Research, Inc. with sample provided by Dynata. The questionnaire was developed and all data analyses were completed in house by the Eagleton Center for Public Interest Polling (ECPIP) in collaboration with, as well as sponsored and paid for by, the [New Jersey Climate Change Resource Center](#), the [New Jersey State Policy Lab](#), the [Rutgers Climate Institute](#), and the [Rutgers Coastal Climate Risk and Resilience Program](#).

The Eagleton Center for Public Interest Polling is part of the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a non-partisan academic center for the study of politics and the political process. Full questionnaires are available on request and can also be accessed through our archives at eagletonpoll.rutgers.edu. For more information, please contact poll@eagleton.rutgers.edu.

³ Post-data collection statistical adjustments require analysis procedures that reflect departures from simple random sampling. We calculate the effects of these design features so that an appropriate adjustment can be incorporated into tests of statistical significance when using these data. The so-called "design effect" or *deff* represents the loss in statistical efficiency that results from a disproportionate sample design and systematic non-response.

Weighted Sample Characteristics

1,002 New Jersey adults 18+

Report

Reflecting on Hurricane Sandy and Hurricane Ida

Two-thirds of New Jerseyans say they or someone they know was affected by Hurricane Sandy 10 years ago (63 percent); three in 10 say the same about Hurricane Ida last year (30 percent).

Just 5 percent believe New Jersey was “very” prepared for Sandy, while another 38 percent say “somewhat prepared.” About half feel just the opposite, with 33 percent saying the state was “not very” prepared and another 18 percent saying “not prepared at all.” Perceptions of the state’s preparedness are more positive when it comes to Ida: over half feel the state was either “very” (12 percent) or “somewhat” (43 percent) prepared, while a quarter say it was either “not very” prepared (16 percent) or not prepared “at all” (10 percent), though a larger number was unsure in the case of Ida (19 percent) compared to Sandy (6 percent).

Views are somewhat split on whether New Jersey is better prepared to handle disasters and extreme weather events now than it was when Hurricane Sandy hit ten years ago. Forty-six percent say the state is more prepared, while 36 percent believe the state is about as prepared for extreme weather events as it was in 2012; 10 percent say the state is less prepared and 8 percent are unsure.

Going forward, New Jerseyans are more positive than negative about the state’s level of preparedness for future extreme weather events. Fourteen percent say the state will be “very” prepared for storms like Sandy and Ida in the next 5 to 10 years, and another 62 percent say “somewhat” prepared. Fifteen percent believe the state will “not [be] very prepared” and just 7 percent say “not prepared at all.”

Attitudes About Extreme Weather

A number of New Jerseyans believe a variety of weather-related events are happening more

often nowadays compared to 25 to 20 years ago. Two-thirds say extreme flooding is happening more often (65 percent), and half perceive a greater frequency in storms like Hurricane Sandy and Hurricane Ida (52 percent) and non-storm-related coastal flooding due to high tides and winds, also known as “sunny day” flooding (50 percent). Four in 10 feel the same about forest fires or wildfires (43 percent), short-term droughts (41 percent), and damaging winds (39 percent).

Climate Change Beliefs

Seventy-eight percent of New Jerseyans believe the Earth’s climate is changing; just 12 percent say it is not and 10 percent are unsure. Almost the same number, moreover, see changing climate conditions as a serious threat to New Jersey – 45 percent say “very serious,” and 27 percent say “somewhat serious”; 15 percent, on the other hand, believe changing climate conditions are “not a very serious threat” and 13 percent say they are “not a threat at all.”

Concern among New Jerseyans about the effects of changing climate conditions on various aspects of life is substantial. Residents see the largest impact on future generations (61 percent “very concerned,” 19 percent “somewhat concerned”). Three-quarters are also concerned about the climate’s impact on plants, animals, and species (52 percent “very concerned,” 22 percent “somewhat concerned”); low-income households (49 percent “very concerned,” 25 percent “somewhat concerned”); New Jersey’s economy (48 percent “very concerned,” 27 percent “somewhat concerned”); infrastructure and roadways (44 percent “very concerned,” 31 percent “somewhat concerned”); and themselves, their family, and their friends (43 percent “very concerned,” 29 percent “somewhat concerned”). Just over two-thirds say they are concerned about the changing climate’s effects on their own town or city (36 percent “very,” 33 percent “somewhat”) and property values (39 percent “very,” 28 percent “somewhat”).

About half say the state will be “very” (10 percent) or “somewhat” (43 percent) prepared to

handle changing climate conditions such as increasing temperatures, rainfall, flooding, and sea level rise in the next 5 to 10 years. Around four in 10 say the opposite—29 percent feel New Jersey will “not [be] very prepared” or “not prepared at all” to handle the changing climate.

Responsibility and Government Involvement

New Jerseyans are most likely to believe that the business corporations and the federal government should have a large obligation when it comes to addressing climate change. More than three-quarters say business corporations and industry (59 percent “a lot,” 22 percent “some”), the United States government (58 percent “a lot,” 22 percent “some”), and fossil fuel companies (56 percent “a lot,” 21 percent “some”) in particular have at least “some” responsibility – with over half in each case saying they should have “a lot.” Following closely behind, residents also believe developed and industrialized nations outside the United States (47 percent “a lot,” 27 percent “some”), car manufacturers (47 percent “a lot,” 26 percent “some”), New Jersey’s own state government (44 percent “a lot,” 30 percent “some”), and the media (42 percent “a lot,” 30 percent “some”) should be held responsible to some degree.

New Jerseyans assign the least amount of responsibility to individual people (36 percent “a lot,” 36 percent “some”), their own local government (33 percent “a lot,” 32 percent “some”), and developing countries (32 percent “a lot,” 38 percent “some”).

A majority of New Jerseyans are dissatisfied with the job various entities are currently doing to address changing climate conditions. Residents are most dissatisfied with the media (72 percent), followed by the three entities they believe should be most responsible for acting on changing climate conditions – the United States government (69 percent), fossil fuel companies (67 percent), and business corporations and industry (65 percent). They are likewise dissatisfied with the job developed and industrialized nations outside of the United States are doing (64 percent) as well as individual people (58 percent). Around half are displeased with what

developing countries (53 percent) and New Jersey's own government (51 percent) are doing to combat changing climate conditions. Just under half feel the same about car manufacturers (48 percent) and their local government (45 percent).

Climate-Related Policies

Overall, New Jerseyans are supportive of the state enacting various policies related to changing climate conditions. About nine in 10 support requiring real estate transactions disclose flood vulnerability to potential buyers (91 percent), reinforcing infrastructure to withstand the effects of changing climate conditions (89 percent), and investing in natural systems like wetlands and trees to buffer climate impacts (88 percent).

About eight in 10 support requiring towns and cities to develop local plans for future climate-related events like hurricanes and flooding (86 percent), creating regulatory standards for development and re-development in flood-prone areas (84 percent), and strengthening building codes to require resilience for new construction or major renovation of homes and commercial properties (78 percent).

Six in 10 to two-thirds support requiring homeowners and business owners in risky areas to buy insurance that will pay for future flood damage (68 percent), requiring investments using state and federal dollars take into account resiliency measures to address changing climate conditions (66 percent), using public monies to replenish and widen beaches (63 percent), and requiring buildings be elevated (60 percent).

Residents are somewhat torn on whether public monies should be used to buy out residential properties in flood-prone areas, however— 47 percent support this as a policy, while 43 percent oppose it.

Emissions and Infrastructure

New Jerseyans are largely in support of certain climate-related requirements when the state government makes large investments in infrastructure in the future, such as bridges and tunnels. Eighty percent believe the state government should be required to include specific plans for the infrastructure to withstand changing climate conditions and extreme weather events; 11 percent think this should not be required, and 8 percent say it depends on the project.

Similarly, 67 percent believe large investments should include specific plans for emissions reductions, while 19 percent say this should not be required; 11 percent once again say it depends on the project.

Forty-three percent of residents believe the government should try to reduce greenhouse gases voluntarily by offering incentives to those who reduce their emissions, while 26 percent say the government should impose limits on the sources of greenhouse gases like emissions from cars, trucks, and industries. Nineteen percent believe the government should take both of these actions and 9 percent believe they should do neither.

A solid majority – 68 percent – believe New Jersey should commit to reducing carbon emissions to as close to net-zero as possible by the middle of this century; 27 percent, on the other hand, say the state should not make this commitment.

Flood-Prone Areas

Opinions on whether or not the state government should get involved in helping residents in areas prone to flooding, severe weather, or storm damage vary based on what type of resident is described as being helped. One random half of the survey sample was asked about residents in “upper-income areas” rebuilding or relocating, while the other half was asked about

residents in “lower- and middle-income areas.”

Within the half of the sample asked about residents in “upper-income areas” rebuilding or relocating, 37 percent say the government should give them the resources to rebuild or relocate, 36 percent say homeowners themselves should pay the costs, and 23 percent say a combination of both.

Support is markedly higher among the other half of the sample asked about residents living in “lower- and middle-income areas” – 62 percent say the government should provide resources, 18 percent say the homeowners should pay associated costs, and 16 percent say a combination of both.

Residents are split on whether the state government should outright prohibit or simply discourage people from building or rebuilding in flood-prone areas. Twenty-six percent say the state government should prohibit building or rebuilding in these areas, 22 percent say the state government should encourage people not to build or rebuild by offering monetary incentives, 27 percent say the state should do both, and 21 percent say it should do neither.

Inflation Reduction Act Incentives

New Jerseyans say they are likely to take advantage of some, but not all, of the major tax breaks and rebates provided by the Inflation Reduction Act as a way to encourage households to help reduce emissions that cause changing climate conditions. Half or more say they are likely to insulate and weatherize their home with tax credits and rebates covering up to \$2,800 (57 percent), install an energy-efficient heating and cooling system with tax credits and rebates covering up to \$10,000 (55 percent), and install a new high-efficiency electric water heater with tax credits and rebates covering up to \$3,750 (51 percent). Residents are far less likely, however, to install solar panels for a 30 percent tax credit (41 percent), buy a qualified electric

vehicle for up to a \$7,500 tax credit (39 percent), or buy an electric stove with rebates covering up to \$840 (35 percent).

How to Pay for Changing Climate Conditions

When it comes to which groups should pay whatever the added costs are to make New Jersey more resilient to the impact of changing climate conditions, residents put most of the onus on the federal government. Nearly seven in 10 (68 percent) say the federal government should pay a “major share” of these costs, followed by companies that generate power using fossil fuels (59 percent), fossil fuel companies and producers (58 percent), and the state government (55 percent). Just over half say their local government (52 percent) and a plurality say companies that generate power without using fossil fuels (46 percent) should only pay a “minor share” of these costs.

When asked about which types of residents should pay whatever the added costs are to make the state more resilient against changing climate conditions, 45 percent say upper-income residents who live in risky areas like flood zones should pay a “major share.” This changes when asked about middle- and lower-income residents living in risky areas – just 9 percent say a “major share,” while 46 percent say this group should pay a “minor share” and 42 percent say they should pay “no share at all.”

New Jerseyans are similarly divided on how much residents who use gasoline-powered cars should pay for these costs – just 11 percent say a “major share,” while 43 percent say a “minor share” and 42 percent say “no share at all.”

More than half (56 percent) believe all residents should pay a “minor share” of costs to make New Jersey more resilient to the impact of changing climate conditions. Just eight percent say all residents should pay a “major share” of costs and 31 percent say “no share at all.”

Fifty-four percent of residents prefer to continue funding roads, bridges, and government buildings at the current cost, while 39 percent are willing to pay a little more in taxes to make these structures better able to withstand severe weather events.

Due to the impact of changing climate conditions, three-quarters of residents believe it is likely they will have to pay more for consumer goods and services (76 percent), as well as in utility bills (75 percent). Seven in 10 believe they personally will have to pay more in property taxes (70 percent). Another three-quarters think the state will need to increase funding for disaster relief to pay for disasters and extreme weather events (75 percent).

New Jerseyans are generally supportive of investing state resources into strategies intended to make the state more resilient against changing climate conditions. Eighty-seven percent support investing in the restoration of natural systems like wetlands to absorb flood water. Seven in 10 support investing in roadway elevation (71 percent) and sea wall construction (69 percent). Around six in 10 support state buyouts of flood-prone homes at fair market value (64 percent) and using state resources to elevate homes (59 percent). Notably, support for state buyouts of residential properties in flood zones increases when the phrase “fair market value” is added, rather than asking support for use of public monies to buy these homes generally.

Solid majorities of residents believe the state should legally dedicate funds that cannot be used for other purposes to support climate preparedness efforts (69 percent) and clean energy programs (64 percent).

Personal Actions and Politics

A majority of New Jerseyans have not taken personal actions to prepare for future extreme weather events as a result of recent events. Just under half (47 percent) of residents report

having prepared a kit with emergency supplies like water, food, and medicine in case of the need to evacuate. About four in 10 have a disaster plan for themselves and their family (42 percent) and have purchased a backup power generator (39 percent). A little more than a quarter (27 percent) say they have purchased additional homeowners' or renters' insurance policies for disasters such as hurricanes, flooding, or wildfires.

When it comes to politics, climate change is a top issue for many in the state. Among registered voters in New Jersey, nearly seven in 10 say the issue of Earth's changing climate is "very" (41 percent) or "somewhat" (27 percent) important to their vote in the 2022 midterm election. Ten percent say the issue is "not very important" to them, and 22 percent say it is "not important at all."

Climate-Related Information Sources

Residents see or hear information about changing climate conditions most frequently from radio, television, or newspapers (57 percent); followed by weather reporters (47 percent); social media platforms (40 percent); climate scientists (32 percent); family, friends, neighbors, or coworkers (24 percent); colleges or universities (24 percent); the state government (20 percent); and local organizations in their community (16 percent).

W1. I am now going to read a list of some weather-related events. For each, I'd like to know if you think these events are happening more often nowadays, less often, or at about the same rate as they were 25 to 30 years ago. Just take your best guess.

Note: This question was asked as a split sample. Half of respondents received the first three items and half received the second three items.

VERSION A

	Storms like Hurricane Sandy and Hurricane Ida	Non-storm-related coastal flooding due to high tides and winds, also known as "sunny day" flooding	Extreme flooding
More often	52%	50%	65%
Less often	8%	7%	4%
About the same rate	39%	36%	30%
Don't know	2%	7%	1%
Unwt N=	481	484	477

VERSION B

	Short-term droughts	Forest fires or wildfires	Damaging winds
More often	41%	43%	39%
Less often	15%	13%	5%
About the same rate	40%	39%	54%
Don't know	5%	4%	1%

P1. Please tell me if you support or oppose each of the following policies New Jersey could enact related to changing climate conditions.

Note: This question was asked as a split sample. Half of respondents received the first five items and half received the second six items.

VERSION A

	Strengthening building codes to require resilience for new construction or major renovation of homes and commercial properties	Reinforcing infrastructure like roads and bridges to withstand the effects of changing climate conditions	Requiring that buildings be elevated
Support	78%	89%	60%
Oppose	18%	10%	29%
Don't know	4%	1%	11%
Unwt N=	492	491	493

	Requiring towns and cities to develop local plans for future climate-related events, such as hurricanes and flooding	Using public monies to buy out residential properties in flood-prone areas
Support	86%	47%
Oppose	12%	43%
Don't know	2%	10%
Unwt N=	492	492

**Eagleton Center for Public Interest Polling
Eagleton Institute of Politics | Rutgers University-New Brunswick**

VERSION B

	Investing in natural systems like wetlands and trees to buffer climate impacts	Creating regulatory standards for development and re-development in flood-prone areas	Requiring investments using state and federal dollars to take into account resiliency measures to address changing climate conditions
Support	88%	84%	66%
Oppose	8%	11%	25%
Don't know	3%	5%	8%
Unwt N=	483	480	484

	Requiring real estate transactions to disclose flood vulnerability to potential buyers	Using public monies to replenish and widen beaches	Requiring homeowners and business owners in risky areas to buy insurance that will pay for future flood damage
Support	91%	63%	68%
Oppose	6%	31%	26%
Don't know	2%	6%	6%
