## Most New Jerseyans Oppose Cutting Services and Raising Fares to Stabilize NJ Transit's Budget

## Rutgers-Eagleton Poll shows support for more state funding to aid mass transportation

NEW BRUNSWICK, N.J. (June 23, 2023) - As NJ Transit debates how to avert its budget shortfall, a majority of New Jerseyans oppose cutting transit services or raising fares to stabilize funding and close the fiscal gap, according to the latest Rutgers-Eagleton Poll.

Fifty-four percent strongly oppose and another 24 percent somewhat oppose cutting services; 19 percent ( 6 percent strongly, 13 percent somewhat) support it. Likewise, 39 percent strongly oppose and another 28 percent somewhat oppose raising fares; 30 percent support it (10 percent strongly, 20 percent somewhat).

New Jerseyans are much more supportive of increasing direct state aid, however: 34 percent strongly support this option to fund NJ Transit and 32 percent somewhat support it. Nearly three in 10 New Jerseyans either somewhat ( 14 percent) or strongly (15 percent) oppose this measure.
"Like with many issues, New Jerseyans do not want to see their own lives impacted through mass transit service cuts or fare hikes - especially if they themselves ride the rails or buses," said Ashley Koning, an assistant research professor and director of the Eagleton Center for Public Interest Polling (ECPIP) at Rutgers University-New Brunswick. "With ridership not yet back at pre-pandemic levels and with riders accustomed to no fare increases in the last eight years, most New Jerseyans place the onus on the state government to keep NJ Transit afloat."

While a majority of every demographic group opposes cutting services and raising fares, some groups are less resistant to these measures than others. Republicans ( 45 percent strongly, 21 percent somewhat) and individuals who report never using public transportation (49 percent strongly, 22 percent somewhat) are less opposed to cutting services compared with their
counterparts. Men (45 percent) and white residents (48 percent) are less likely than their counterparts to strongly oppose this measure.

Men (31 percent strongly, 30 percent somewhat) and individuals in households making $\$ 100,000$ or more annually ( 35 percent strongly, 27 percent somewhat) are less likely than their counterparts to oppose raising transit fares. White residents ( 33 percent) are less likely to strongly oppose this measure compared with nonwhite residents ( 45 percent).

More than half of nearly every group strongly support increasing direct state aid to stabilize NJ TRANSIT's budget: Republicans are the only group who do not reach a majority in favor of it. About two-thirds of riders and nonriders alike support increasing state aid to some degree.
"Unsurprisingly, Democrats and Republicans are divided on what would be considered a budget issue," said Jessica Roman, a research associate at ECPIP. "While Republicans are the most opposed and most divided of any demographic group, Democrats are the most supportive of increasing direct state aid to stabilize NJ Transit's budget."

New Jerseyans' ratings of public transportation in the Garden State are mixed: 5 percent rate the state's mass transit system as "excellent," 35 percent "good," 31 percent "only fair," 14 percent "poor," and 16 percent are unsure. A plurality of those who use public transportation in the state at least a few times a year - 48 percent - rate it as "good," with another 30 percent rating it as "only fair."

Nearly half (47 percent) of New Jerseyans say they never use public transportation.

Results are from a statewide poll of 1,002 adults contacted by live interviewers on landlines and cellphones from April 27 to May 5. The full sample has a margin of error of $+/-3.6$ percentage points.

## ABOUT RUTGERS UNIVERSITY-NEW BRUNSWICK

Rutgers University-New Brunswick is where Rutgers, the State University of New Jersey, began more than 250 years ago. Ranked among the world's top 60 universities, Rutgers's flagship university is a leading public research institution and a member of the prestigious Association of American Universities. It is home to internationally acclaimed faculty and has 12 degreegranting schools and a Division I Athletics program. It is the Big Ten Conference's most diverse university. Through its community of teachers, scholars, artists, scientists and healers, Rutgers is equipped as never before to transform lives.

## ABOUT THE EAGLETON CENTER FOR PUBLIC INTEREST POLLING

Home of the Rutgers-Eagleton Poll, the Eagleton Center for Public Interest Polling (ECPIP) was established in 1971 and is the oldest and one of the most respected university-based statewide polling operations in the United States. Now in its 52nd year and with the publication of over 200 polls, ECPIP's mission is to provide scientifically sound, nonpartisan information about public opinion. To read more about ECPIP and view all of our press releases, published research and data archive, please visit our website: eaqletonpoll.rutgers.edu. You can also visit our Facebook and Twitter.

## ABOUT THE EAGLETON INSTITUTE OF POLITICS

The Eagleton Center for Public Interest Polling is a unit of the Eagleton Institute of Politics at Rutgers University-New Brunswick. The Eagleton Institute studies how American politics and government work and change, analyzes how the democracy might improve and promotes political participation and civic engagement. The Institute explores state and national politics through research, education and public service, linking the study of politics with its day-to-day practice. To learn more about Eagleton programs and expertise, visit eagleton.rutgers.edu.

## QUESTIONS AND TABLES START ON THE FOLLOWING PAGE

## Questions and Tables

The questions covered in this release are listed below. Column percentages may not add to $100 \%$ due to rounding. Respondents are New Jersey adults; all percentages are of weighted results. Interpret groups with samples sizes under 100 with extreme caution.

T1. How often do you use public transportation, regardless of whether it is for work or for personal use? Is it almost every day or more, a few days a week, a few days a month, a few days a year, or do you never use public transportation?
Note: This question was part of a split block. Half of respondents received questions about transportation and half of respondents received questions about another topic.

| Almost every day (or more) | $6 \%$ |
| :--- | :---: |
| Few days a week | $7 \%$ |
| Few days a month | $7 \%$ |
| Few days a year | $32 \%$ |
| Never | $47 \%$ |
| Don't know | $0 \%$ |
| Unweighted $\mathbf{N}=$ | 501 |

|  | Party ID |  |  | Gender |  | Race or Ethnicity |  | Age |  |  |  |

## Methodology

The Rutgers-Eagleton Poll was conducted by telephone using live interviewers April 27 to May 5, 2023, with a scientifically selected random sample of 1,002 New Jersey adults, 18 or older. Persons without a telephone could not be included in the random selection process. Respondents within a household are selected by asking randomly for the youngest adult male or female currently available. If the named gender is not available, the youngest adult of the other gender is interviewed. This telephone poll included 304 adults reached on a landline phone and 698 adults reached on a cell phone, all acquired through random digit dialing; 250 of the cellphone completes were acquired through one-to-one SMS text messaging by live interviewers that led respondents to an online version of the survey. Distribution of phone use in this sample is:

| Cell | $45 \%$ |
| :--- | :--- |
| Text to Web | $25 \%$ |
| Landline | $30 \%$ |

The data were weighted to be representative of the residential adult population of New Jersey. The weighting balances sample demographics to target population parameters. The sample is balanced, by form and overall, to match parameters for sex, age, education, race/ethnicity, region and phone use. The sex, age, education, race/ethnicity, and region parameters were derived from 2021 American Community Survey PUMS data. The phone use parameter was derived from estimates provided by the National Health Interview Survey Early Release Program. ${ }^{1}$

Weighting was done in two stages. The first stage of weighting corrects for different probabilities of selection across the telephone samples associated with the number of adults in each household and each respondent's telephone usage patterns. This adjustment also accounts for the overlapping landline and cell sample frames and the relative sizes of each frame and each sample. ${ }^{2}$

The final stage of weighting balances sample demographics, overall and by form, to match target population benchmarks. This weighting was accomplished using SPSSINC RAKE, an SPSS extension module that simultaneously balances the distributions of all variables using the GENLOG procedure. Weights were trimmed to prevent individual interviews from having too much influence on survey estimates. The use of these weights in statistical analysis ensures that the demographic characteristics of the sample closely approximate the demographic characteristics of the target population.

Post-data collection statistical adjustments require analysis procedures that reflect departures from simple random sampling. We calculate the effects of these design features so that an appropriate adjustment can be incorporated into tests of statistical significance when using these data.

All surveys are subject to sampling error, which is the expected probable difference between interviewing everyone in a population versus a scientific sampling drawn from that population. Sampling error should be adjusted to recognize the effect of weighting the data to better match the population. In this poll, the simple sampling error for 1,002 New Jersey adults is $+/-3.1$ percentage points at a 95

[^0]percent confidence interval. The design effect ${ }^{3}$ is 1.36 , making the adjusted margin of error $+/-3.6$ percentage points. Thus, if 50 percent of New Jersey adults in this sample favor a particular position, we would be 95 percent sure that the true figure is between 46.4 and 53.6 percent ( $50+/-3.6$ ) if all New Jersey adults had been interviewed, rather than just a sample.

Sampling error does not consider other sources of variation inherent in public opinion studies, such as non-response, question wording, or context effects.

This Rutgers-Eagleton Poll was fielded by Braun Research, Inc. The questionnaire was developed and all data analyses were completed in house by the Eagleton Center for Public Interest Polling (ECPIP). Jessica Roman assisted with analysis and preparation of this report. The Rutgers-Eagleton Poll is paid for and sponsored by the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a nonpartisan academic center for the study of politics and the political process. Full questionnaires are available on request and can also be accessed through our archives at eagletonpoll.rutgers.edu. For more information, please contact poll@eagleton.rutgers.edu.

## Weighted Demographics <br> 1,002 New Jersey adults 18+ Overall Margin of Error $=+/-3.6$ percentage points

    ${ }^{2}$ Buskirk, T. D., \& Best, J. (2012). Venn Diagrams, Probability 101 and Sampling Weights Computed for Dual Frame Telephone RDD Designs. Journal of Statistics and Mathematics, 15, 3696-3710.

[^1]:    ${ }^{3}$ Post-data collection statistical adjustments require analysis procedures that reflect departures from simple random sampling. We calculate the effects of these design features so that an appropriate adjustment can be incorporated into tests of statistical significance when using these data. The so-called "design effect" or deff represents the loss in statistical efficiency that results from a disproportionate sample design and systematic nonresponse.
